

Recommendation Systems with SVD

SVD - Definition

$$\mathbf{A}_{[m \times n]} = \mathbf{U}_{[m \times r]} \Sigma_{[r \times r]} (\mathbf{V}_{[n \times r]})^T$$

- **A: Input data matrix**
 - $m \times n$ matrix (e.g., m documents, n terms)
- **U: Left singular vectors**
 - $m \times r$ matrix (m documents, r concepts)
- **Σ : Singular values**
 - $r \times r$ diagonal matrix (strength of each 'concept')
(r : rank of the matrix **A**)
- **V: Right singular vectors**
 - $n \times r$ matrix (n terms, r concepts)

SVD - Properties

It is **always** possible to decompose a real matrix \mathbf{A} into $\mathbf{A} = \mathbf{U} \Sigma \mathbf{V}^T$, where

- $\mathbf{U}, \Sigma, \mathbf{V}$: unique
- \mathbf{U}, \mathbf{V} : column orthonormal
 - $\mathbf{U}^T \mathbf{U} = \mathbf{I}; \mathbf{V}^T \mathbf{V} = \mathbf{I}$ (\mathbf{I} : identity matrix)
 - (Columns are orthogonal unit vectors)
- Σ : diagonal
 - Entries (**singular values**) are positive, and sorted in decreasing order ($\sigma_1 \geq \sigma_2 \geq \dots \geq \mathbf{0}$)

SVD – Example: Users-to-Movies

● $A = U \Sigma V^T$ - example: Users to Movies
